

# Architecture for Learning – a Danish Perspective

In the recent years, **Danish architects and designers** have created a number of new and inspiring spaces for learning – spaces where **teaching, play, design and architecture are interlinked and support each other.**

## Exhibition and B2B- programme

These spaces tap into a context and tradition of buildings designed with an eye for citizens' need and the life between walls and buildings. And **they are deeply interlinked with the surrounding city**; schools and research institutions use the city as an informal setting for learning, and their activities often incorporate and experiment with urban spaces.

Thus, **we proudly present examples of Danish learning spaces**, and we present a variety of well-designed buildings with a playful and people-centred focus.

**Danish SCHULBAU LIVE:** Learning environment beyond institutional borders. **Join us** for a brief presentation on new Danish approaches to **combine learning environments and public space** and talk session on how urban development can become a corner stone in the learning society.

Talks by: **Marie Østergaard** — City of Aarhus/DOKK1  
**Jens Bager** — Sleth Architects  
**Boris Brorman Jensen** — The Architecture Project

**B2B VIP:** Presentations by selected Danish architectural firms. **Selected firms present their solutions** on how architecture can improve play and learning, and a number of speakers will give their perspectives.  
**By invitation only.**

**Reception** **Informal networking, drinks and food.**
